Motorola cp200 lithium ion battery

Motorola high performance batteries are designed to be as reliable as your radio. Lightweight and slim, Li-ion batteries offer reliable communication with higher capacity in a smaller package. This battery is designed for commercial tier radios. Warranty 1 Year Manufacturer Warranty Chemistry Lithium-Ion 2250 mAhr IP Rating IP54 Compatible with CP200(d), CP150 Nickel Metal Hydride (NiMH), 1400 mAh Motorola Original Battery for CP150 and CP200 Series Radios. Buy Online High Capacity Lithium-ion (Li-ion), 2250 mAh Motorola Original Battery for CP150 and CP200 Series Radios. Buy Online Slim Premium Lithium Ion (Li-ion) battery - 1600 mAh. Buy Online Nickel Metal Hydride (NiMH), 1300 mAh, Motorola Original FM Battery for PR400 radios. Buy Online Nickel Metal Hydride (NiMH), 1300 mAh Motorola Original Battery for CP150/200 and PR400 Series Radios. Buy Online This clamshell battery is ideal for missions where charging you battery is not an option. Lithium-ion (Li-ion), 2700 mAh Motorola Original Battery for XTS 1500 and XTS 2500 Radios. Lithium-ion (Li-ion), 2800 mAh Motorola Original Battery for CP150 and CP200 Radios. High capacity lithium-ion (Li-ion), 3200 mAh battery for RM Series Radios. High capacity NiMH, 3500 mAh Motorola Original Battery for XTS Series Radios. Buy Online Nickel Metal Hydride (NiMH), 1300 mAh Motorola Original Battery for VL130 radios. Lithium-ion (Li-ion), 1800 mAh Motorola Original Battery for EX Series Radios. MSHA Certified, Nickel Metal Hydride (NiMH), 1280 mAh Motorola Original Battery for HT Series Radios. Buy Online Lithium-ion (Li-ion), 1400 mAh Motorola Original Battery. Nickel Metal Hydride (NiMH), 1400 mAh Motorola Original Battery for P1225 Radios. High capacity lithium-ion (Li-ion), 2900 mAh Motorola Original Battery for SRX 2200 Radios. Protect batteries with these durable replacement covers. Batteries for the Minitor VI Pager. Battery door for standard 1130 mAh, CLP Series battery. Lithium-ion (Li-ion), 1800 mAh Motorola Original Battery for EX Series Radios. Lithium-ion (Li-ion), 2300 mAh Motorola Original Battery for EX Series Radios. Lithium-ion (Li-ion), 1380 mAh Motorola Original Battery for EX Series Radios. Lithium-ion (Li-ion), 1800 mAh Motorola Original Battery for EX Series Radios. Li-Ion 2200 mAh Battery (BT100x) The CP200 and the CP200D Radios use the same batteries. You have several options to choose from as you can see by the chart below. There is not a big difference in price from the top of the line lithium ion battery for the CP200 and CP200D radios at 2500 mAh to the lowest end Nicad battery so most people tend to go with the higher end batteries. However you need to have a Tri Chemistry charger for the CP200 and CP200D to use the Lithium batteries so it is important you check your chargers compatibility before making your choice. Motorola CP200 Radio Batteries FacebookTwitterRedditLinkedInTumblrPinterestKEmail Comments are closed. Copyright 2012 - 2018 Two Way Radio Supply LLC | All Rights Reserved Lightweight, lithium-ion batteries underpin much of modern technology, and are essential to the causes of green energy. Learn more about how lithium-ion batteries are used, as well as their scientific history and future potential.Lithium-ion Battery UseLithium-ion batteries consist of five layers: a negative current collector, an anode that attracts negatively charged ions, an ion-conducting separator, a cathode to attract positively charged ions and a positive current collector. Lithium-ion batteries are used in electric vehicles and for grid-scale energy storage, and power many electronics. Though this power source is expensive, the price of battery storage may be half of today's cost by 2025, as reported in Scientific American. The popularity of electric vehicles in the United States is one phenomenon that could drive the prices for lithium-ion batteries down. Automobile industry experts predict that electrical vehicles will make up 10 percent of the market by 2020. Conventional lithium-ion batteries depend on an extremely flammable liquid electrolyte to transfer the charge between the cathode and anode. Liquid lithium-ion batteries can ignite quickly if they overheat, while new solid-state versions undergoing experimentation are more stable.Lithium-ion HistoryScientists in the United States invented lithium-ion batteries, but Japanese electronics company Sony Corp. first commercialized them to power personal devices like cassette players and video cameras. Lithium-ion batteries became essential to powering cell phones, model airplanes and power tools. Tesla put 6,800 lithium-ion batteries inside a roadster in 2006, which led to the company's first car, the Tzero. This was the start of the development of plug-in electric vehicles. Arlington, Virginia-based AES used the lithium-ion car batteries to fuel the North American power grid through its 100 MW battery.Wearable TechnologyToday, scientists are working to design batteries to build into a variety of objects. In 2012, researchers developed a paint-on lithium-ion battery consisting of five layers, just like conventional lithium-ion batteries. This technology could change the way batteries are manufactured and enable more surfaces to be used for energy storage. In 2014, researchers in China developed lithium-ion batteries that can be stretched as much as 600 percent, as stated in Scientific American. Fiber-shaped batteries based on this technology could be woven into textiles for wearable devices of the future. Still other teams are working on making thin and flexible lithium-ion batteries.Recycling Lithium-Ion BatteriesWhen recycling lithium-ion batteries, the cobalt and nickel components are more valuable than the actual lithium. Lithium-ion batteries from Teslas, laptops and industrial plants are frozen to -325 degrees below Fahrenheit to diffuse the lithium. Then they are sheared, shredded and separated into resale parts. Scientists have also created an experimental power supply out of lithium-ion batteries taken from laptop battery packs.Pena Station NextThis community outside of Denver has goals to rely on a power system fueled by a king-sized lithium-ion batteries, solar energy and numerous energy-efficiency plans to create a carbon-free city. Xcel Energy would contribute a grid-connected, one-megawatt battery to deliver backup power and related services to Pena Station Next. The Japan-based global conglomerate Panasonic would complete the building where the battery is to be connected.
